team to deliver quick support where and when your customers need it, whether it be in-game, on your website, or with a Web form or shopping cart. The live chat support channel provides an opportunity to increase web sales conversion rates by proactively inviting prospects or customers to chat with available sales or support representatives if they need help or information.

Monitor and Measure Support

For managers, *Parature Chat* provides complete oversight over all chat queues and support representatives. Monitor any representative for chat quality, “whisper” advice or assistance, initiate a group chat and route chats to specific agents based on product knowledge, experience or availability. Measure important analytics including abandonment rate, wait-time in queue, support representative performance, group performance and more.

Benefits

- Ensure fast, personal responses to online consumers
- Increase efficiency and productivity without increasing headcount
- Improve time to resolution
- Reduce shopping cart, web form, online navigation and transaction abandonment rates
